LED SOFT TAPE INSTALLATION INSTRUCTIONS

stone
L I G H T I N G

1 Clean the area thoroughly where line LED will be installed. Use the included heat sink tape for installations on non-aluminum or copper surfaces to ensure proper heat dissipation. LED line may not reach it's rated average life when installed otherwise.

2 Remove the backing from the LINE LED and firmly press down making sure there are no air bubbles that can cause surface irregularities.
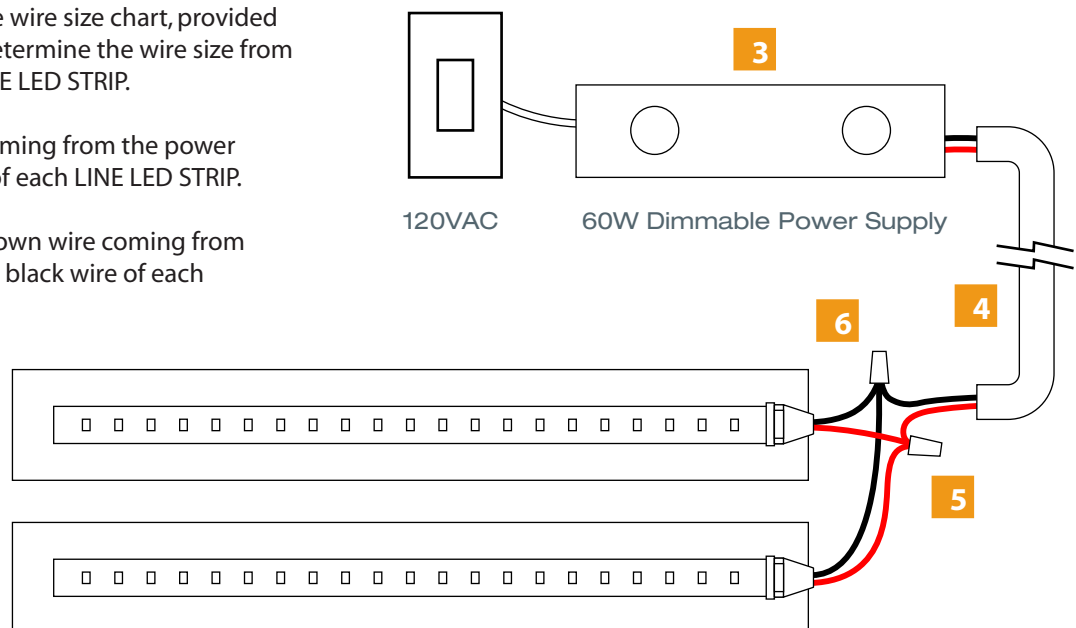

3 Install the power supply by referring to the instructions provided with the power supply.

4 Refer to the Low voltage wire size chart, provided with power supply to determine the wire size from the power supply to LINE LED STRIP.

5 Connect the red wire coming from the power supply to the red wire of each LINE LED STRIP.

6 Connect the black or brown wire coming from the power supply to the black wire of each LINE LED STRIP.

120VAC   60W Dimmable Power Supply
